

NDA Monthly Update

March 2016

Summary

- Major milestone at historic Sellafield fuel pond
- Mentoring scheme opens for small businesses
- Update on NDA Strategy and Business Plan
- New Sellafield Chair announced
- 2016 Supply Chain Event date confirmed
- NDA's Insight magazine published
- Website moves home
- Funding support for innovators
- Last fuel leaves Oldbury
- Wylfa closes after almost 45 years
- Waste overview published
- Silo equipment delivered to Sellafield

Diary Dates

- | | |
|-------------------------------------------------|-------------|
| • Dounreay suppliers event | 8 March |
| • National Apprenticeship Week | 14-18 March |
| • Sellafield share transfer | 1 April |
| • Publication of NDA Strategy and Business Plan | April |
| • NDA Archive Open Day, Wick | April |

Major milestone at historic fuel pond

The “most significant stride ever” was achieved in the Sellafield clean-up mission when the entire bulk stocks of historic nuclear fuel were removed from one of the site’s oldest ponds. The milestone came after decommissioning teams lifted the final skip of ‘metal fuel’ from the Pile Fuel Storage Pond via a remote-controlled process. Retrieval of the pond’s ‘canned fuel’ inventory was successfully completed in October 2015. The work means radioactivity levels at the 68-year-old spent fuel pond have now been cut by 70 per cent, vastly reducing the risk it poses to people and environment. The achievement is the most visible sign yet of progress in the NDA’s programme to clean-up the legacy of Britain’s early nuclear industry, which is set to continue for at least another 100 years. The fuel has been transferred to a modern on-site storage building.

Mentoring scheme welcomes applications

A mentoring scheme for smaller businesses has re-opened to applications. The voluntary scheme operates for two years, pairing Small and Medium-sized Enterprises (SMEs) with larger organisations to share skills, experience and contacts with the aim of helping SMEs navigate through the maze of nuclear decommissioning opportunities. All UK-based SMEs are eligible to apply to become a mentee, regardless of industrial background, but must aspire to work in nuclear decommissioning or have an existing involvement. The deadline for applications is 15 April.

Strategy and business plan update

Consultations on the NDA’s draft strategy and draft business plan 2016 to 2019 closed on 15 February. The feedback is being analysed and the final version of both documents, together with the public feedback, will be available in early April. Both documents take the government’s Spending Review into account. The strategy, published every five years, looks at the long-term mission while the Business Plan, published annually, takes a more focused look at the next three years.

New chair for Sellafield Ltd board

The NDA has announced that Tony Fountain will become the new chair for Sellafield Ltd, taking up the role on 1 April 2016 as part of new management arrangements which will see Sellafield Ltd become a wholly owned NDA subsidiary. He will replace current chair Tony Price. Tony Fountain brings valuable knowledge of the nuclear industry having been Chief Executive of the NDA from 2009 to 2011.

Date confirmed for 2016 Supply Chain Event

The date of the next annual networking event for NDA suppliers has now been confirmed as **Thursday, 3rd November**. For 2016, the NDA Estate Supply Chain Event again returns to EventCity in Manchester, providing opportunities for businesses of all sizes to exhibit in the main hall and to meet leading figures in nuclear decommissioning. The one-day event is free of charge for visitors and exhibitors (optional extras are subject to a small fee). Launched in 2011, its aim is to continue improving the visibility of opportunities for suppliers, particularly those in the Small and Medium-sized Enterprise (SME) community. Further details will be published shortly.

Insight magazine published

The Spring edition of the NDA's news magazine Insight has been published and is available on the website.

New home for NDA website

The NDA's website content has now been moved to the central government website and the old website has been switched off. Web users should be automatically redirected to the new content. Meanwhile, the new website also includes a recently launched NDA blog post, with contributions from guest authors on a range of topics.

How the UK is providing support

As the fifth anniversary of the Japanese tsunami is marked this month, the NDA's Head of International Relations, John Mathieson, looks at international support for clean-up work at the Fukushima Dai-ichi nuclear plant and the contribution made by UK businesses.

£500,000 for innovative smaller businesses

The NDA is contributing £500,000 to a £1.5 million initiative to encourage smaller businesses to find new ways of solving some of the energy industry's technical challenges. The contribution takes Innovate UK's Energy Game Changer fund, announced last year, to £2 million. The funding support aims to attract innovative Small and Medium-sized Enterprises (SMEs) into all energy sectors, including oil, gas and nuclear. The NDA is particularly interested in technologies that could be applied to decommissioning challenges. Allocation of funding will take place through a competitive process that opens on 28 March.

Last fuel leaves Oldbury

The last flask of fuel has been dispatched from Oldbury for reprocessing at Sellafield, completing a defuelling programme that began when the power station closed in 2012. Transfer of the last fuel also removes 99 per cent of the radioactive hazard from the site and enables Oldbury to move into its decommissioning phase. The aim is to reach the passive Care and Maintenance by 2027.

UK's last Magnox plant closes

Wylfa, the last Magnox power station in the UK, finally closed after generating electricity for almost 45 years. Closure was originally scheduled for 2010, however, its life was extended for a further five years thanks to an innovative method of transferring partly used fuel from one reactor to the other. The manufacture of Magnox fuel ceased in 2008. Wylfa was the last and largest in a fleet of 11 UK plants based on the ground-breaking Magnox design that gave the nation's scientists a global lead in the race to develop nuclear energy for homes and businesses. The combined additional revenue from Wylfa's extra lease of life, as well as from Oldbury's four-year extension, amounted to approximately £1 billion which has been used for decommissioning and clean-up.

Waste overview published

The NDA has published an updated overview of Higher Activity Waste (HAW), containing details about where waste arises and how it is being dealt with. The information summarises volumes and forms of HAW in stock and estimated to arise in future from NDA estate activities. Data has been sourced from the 2013 UK Radioactive Waste Inventory and from NDA SLCs. The report also includes a summary of total HAW volumes across the UK (from all radioactive waste producers) and an overview of long-term management policy for HAW. The document is aimed at all organisations and individuals with an interest in HAW. It is also being used to inform the development of the NDA's strategy for managing HAW, which is due to be finalised in 2016.

Bulk delivery of silo equipment

One of Sellafield's most hazardous buildings is closer to being cleaned up after delivery of a massive piece of decommissioning kit. The 50-tonne 'transfer tunnel', which will be hoisted into place at the Magnox Swarf Storage Silo, is the main component of the first Silo Emptying Plant (SEP), one of three 360-tonne machines which will scoop out the building's highly radioactive contents.
