

NDA Monthly Update

October 2019

Summary

- Radioactive waste in the spotlight
- Royal visit marks dialogue with Japan
- NDA honours safety excellence
- NDA names new Non-Executive Director
- History made as plants complete defueling
- Daily grind foiled at Chapelcross
- Magnox Ltd becomes NDA subsidiary
- Special delivery marks Sellafield milestone
- Tallest stack cut down to size
- Successful start to repackaging plutonium
- Scottish event celebrates diversity
- NDA's £495,000 pledge to Anglesey plan
- NDA publishes annual report and accounts

Diary Dates

7 November: World Digital Preservation Day

7 November: National Stress Awareness Day

11 November: Anti-Bullying Week

Early December: NDA publishes annual draft Business Plan

5 December: Nuclear Industry Association (NIA) annual conference, London

Radioactive waste in the spotlight

The NDA joined forces with the Nuclear Institute for the Integrated Waste Management Conference 2019, held in Penrith. More than 250 delegates attended the two-day for a packed programme that included panel sessions, exhibitions and a range of speakers including government officials, regulators, supply chain companies, consultants and waste management experts. Earlier this year, the NDA launched its Radioactive Waste Strategy.

NDA Monthly Update: October 2019

Royal visit marks long-standing dialogue with Japan

Her Royal Highness The Princess Royal heard first-hand how the UK and Japan are collaborating on nuclear decommissioning when she attended a reception at the British Embassy in Tokyo. NDA Strategy and Technology Director Dr Adrian Simper was among the presenters discussing the knowledge exchange between the two countries. He also outlined the NDA's commitment to working in partnership with local communities, and the sharing of decommissioning knowledge as Japan continues the clean-up at Fukushima Dai-ichi.

NDA honours safety excellence at top awards

Shining examples of safety and wellbeing in the nuclear industry were honoured at the NDA's awards ceremony. The first Safety and Wellbeing Awards, held in Manchester, recognised the exceptional work being done across the group. Eleven winners picked up awards in front of around 250 people at the ceremony. All were chosen for their achievements and successes in keeping the workforce safe and well.

New Non-Executive Director joins NDA Board

The NDA has announced the appointment of Michelle Heath to its Board as an additional Non-Executive Director for a three-year term. Michelle has a 20-year track record in the nuclear industry, focused on waste management, having previously worked for BNFL, Springfields Fuels and Westinghouse Toshiba. She holds an MBA and BSc from Lancaster University.

History made as plants complete defuelling

The last nuclear fuel has been safely shipped from Wylfa on Anglesey, and Calder Hall in Cumbria, for reprocessing at Sellafield, marking a major decommissioning milestone for the UK. The completion of defuelling at both former nuclear power stations removes 99% of radioactivity from the sites. Wylfa, the last and largest of the UK's Magnox power station fleet, opened in 1971 and closed in 2015. Calder Hall, by contrast, was the world's first nuclear power station to generate electricity on a commercial scale. Opened by the Queen in 1956 amid a national fanfare, it was hailed as the dawn of the atomic age and led the way for 10 further power stations based on the Magnox design. Electricity generation stopped in 2003.

NDA Monthly Update: October 2019

Daily grind foiled at Chapelcross

The daily grind is looking up after foil coffee bags perked up a project to prevent radioactive gases from escaping during work to decommission the nuclear site. The packets – which use technology designed to keep coffee aromas locked in - mean workers can safely seal radioactively contaminated waste into bags so it can be more easily and safely handled. The idea was brewed by experts at the Culham Centre for Fusion Energy in Oxfordshire, and is now being trialled during work to dismantle Chapelcross' former processing plant that had become contaminated with radioactive tritium as a historical legacy of its operations.

Magnox becomes NDA subsidiary

Magnox Ltd has become a wholly owned subsidiary of the NDA after ownership transferred from the Parent Body Organisation, Cavendish Fluor Partnership, on 1 September. The transfer follows the announcement in July 2018 and marks a new approach to managing the UK's 13 Magnox sites - 10 former nuclear power stations, two nuclear research sites and a hydroelectric plant. The change in management structure follows a similar change at Sellafield in 2016, where the new model is facilitating progress and providing increased value for money for the taxpayer.

Special delivery marks Sellafield milestone

One of the most important construction projects at Sellafield took a major step forward when two huge vessels arrived at Sellafield's Box Encapsulation Plant (BEP). BEP will play a vital role taking nuclear waste retrieved from original waste plants, primarily the Magnox Swarf Storage Silo, and boxing it up for safe storage in a modern building. The complex vessels, manufactured in Carlisle, will collect and sample highly active effluents before transfer to a specialist facility that manages the material.

Tallest stack cut down to size

The demolition of Sellafield's tallest stack is almost complete. A nine-metre stub is all that remains of the First Generation Reprocessing Plant stack after a 30-month project to painstakingly remove 52 metres by hand. Its proximity to hazardous nuclear buildings on the site meant traditional explosive techniques were out of the question. Instead, workers cut away the concrete and steel stack while standing on a platform which clung to the chimney using friction alone. Before demolition could start, the platform had to climb to the top of the chimney, like a monkey shinning up a tree. It took 10 months to inch its way to the peak: 122 metres above the ground.

NDA Monthly Update: October 2019

Successful start to repackaging plutonium

One of the most important risk reduction tasks in the UK nuclear industry has achieved its first milestone. Experts at Sellafield opened and repacked a historic plutonium can for the first time as part of a £1 billion programme to address a degradation risk identified in a small proportion of the canisters, which date from about 50 years ago. The highly skilled work requires operators to deftly manoeuvre the package inside a sealed glovebox. The material was originally placed in an inner can wrapped in a plastic casing and placed into an 'overpack' can. But in a small proportion of packages, the outer can has shown signs of degradation. The task is to take the inner can out of the 'overpack', clean off as much plastic as possible, then reseal it in a modern robust outer can. The first successful repackaging kicks off a 5-year work programme.

Scottish event celebrates equality and diversity

This year's Mey Highland Games, sponsored by the NDA, celebrated equality and diversity, and were the first of their kind to welcome adaptive athletes. NDA Chief Executive David Peattie presented three new trophies to the top female, male and adaptive athletes. STEM ambassadors from Dounreay were on hand to promote their work to inspire young people into science, technology, engineering and maths.

£495,000 pledge to North Anglesey economic plan

The NDA announced funding support of £495,000 to help support the County Council's North Anglesey Economic Regeneration Plan and create new economic opportunities on the island. Chief Executive David Peattie made the announcement at the third annual NDA Stakeholder Summit, which was held Coleg Menai in Llangefni. Around 200 visitors from across the UK and overseas attended the two-day event. The funding will contribute to measures aimed at boosting business activity, the supply chain and employment, increasing tourism, improving transport and infrastructure and reviving the High Street.

NDA publishes annual report and accounts

The NDA's annual report and accounts for 2018/19 reviews a year of progress towards the mission of cleaning up and decommissioning the UK's 17 oldest nuclear sites. The report shows good progress continues to be made, while spending has remained below the annual budget set by government. The NDA exceeded revenue targets, generating income of £1 billion to supplement the £2.2 billion government allocation.
