

## **Graham Finn.**

I have recently retired after 46 years in the nuclear industry, 38 of those years I worked at Dungeness and the last eight years I have worked in senior corporate roles.

I started work as an apprentice at the Dungeness A and B site after leaving Southlands school in New Romney. During this apprenticeship I gained a qualification in Mechanical Engineering. After completing my apprenticeship, I worked in the maintenance department of Dungeness A.

In 1985 I moved to Dungeness B and undertook training to become a nuclear physicist, this involved going back to University to gain a Physics Degree. After carrying out the nuclear physicist role for a number of years I moved into the operations department of Dungeness B.

I stayed in the operations department for 14 years, when I started in Operations I trained to be a Reactor Control Engineer, Then I carried out roles such as the Plant Engineer, Control room supervisor and Shift Manager.

After working in operations I moved into management positions on Dungeness B here I covered the Operations Manager, Technical and Safety Manager, Plant Manager and then became the Station Director.

After leaving Dungeness eight years ago, I ran EDFs Nuclear Generation Health, Safety and Environmental department at the corporate office in Gloucester. Having started off running this in just the Nuclear Generation side of the business, I then led the integration of it into the whole of EDFs UK business.

In the last two years I have been EDFs Director of international affairs supporting other nuclear business around the world.
